Organizing the 7th International Conference on Remote Sensing (RSCY2019)

The Department of Meteorology and the Remote Sensing and Geo-environment Lab (Eratosthenis Research Center) at the Department of Civil Engineering and Geomatics in Cyprus University of Technology have collaborated in the organizing of the 7th International Conference on Remote Sensing and Geo-Information of Environment (RSCY2019) on March 18-21, 2019.

The conference will take place at the Aliathon Holiday Village in Paphos, Cyprus. This conference aspires to bring together international scientists working in the disciplines of Remote Sensing and Geo-Informatics and their applications to the General Environment.

The co-operation between the Department of Meteorology and the Cyprus Technical University goes beyond the organization of the RSCY2019 conference (as well as past conferences on the same topic), into their common participation in various research programs, such as the EXCELSIOR Project, which is ran under the funding of Horizon 2020 TEAMING (the EU Research and Innovation program for 2020), whose aim is the creation of the ERATOSTHENES Center of Excellence.

The Department of Meteorology participates in the second phase of this project.
